July 2010

Finally Back Home Again

Thanks go to all who covered for me while I was out marrying off my youngest daughter in Pennsylvania and then attending a 30th wedding anniversary celebration in southern California the following weekend. Both events were very enjoyable, but it is certainly good to be back home again. Traveling is not one of my favorite activities. The weather was beautiful in both places, although it was a bit cold for me in California (76 high, 66 low). Nothing like the Texas heat to keep the old bones moving.

I did not take a radio with me, not even a VHF HT, but then I would not have had any time to operate it if I did. Now to rest up and catch up with all the things that had to wait (like this newsletter).

5 Years Now

As of the first of August, I will have completed 5 years as your manager. The net has stayed alive, in spite of declining "real" traffic, and the loss of several members during that time who have gone to their heavenly reward. I will continue, thanks to the great support of Rodney, W5DY, our assistant manager, until someone comes forward who wants to assume the position. I note that my friend Ken, K6CTW, has just resigned as manager of Region Net 6. Ken also has been manager of that net for 5 years. I keep trying to talk him into moving to Texas, and I hope in time that will occur, giving us another good traffic handler on TEX, RN5, and CAN.

Recordkeeping and publishing this newsletter on a monthly basis do take a significant investment in time. I have considered changing to a bi-monthly schedule for the newsletter. Anyone have feedback on that?

I believe the newsletter is a great motivator for the net, which is why I have continued with it. Just look at the TEX website to see all the issues that have been published. However, it may be time for someone new to step in and shake things up a bit. We tend to become complacent after such a long time. New blood and a fresh outlook can sometimes work wonders.

Field Day

Field Day was held the weekend before I left for Pennsylvania. I participated with the W5ROK (Rockwell Collins ARC) group and had a good time knocking down contacts on 40 and 80 CW. Rodney operated from the W5DSC ("Dead Stinkin' Cow"), Victoria ARC and Scott, W5ESE, was again with the KE5LOT group. Floyd, N5EL, and Pat, KD5TXD, supported the net on the early session as well. Only Rodney and I made it to the late session. CAN and late RN5 were both pretty much wiped out by the FD QRM, however. FD messages continued to trickle in for over a week after the event.

*Also see **TEX Mailbox** for Pat's description of FD in the Wild Horse Desert.*

RANDOM RECOLLECTIONS OF AN OLD HAM

-by George Hart W1NJM

A journalistic history of the life and times in the Amateur Radio world of George Hart, W1NJM

Thanks to Sis, WD8DIN, and the Hit and Bounce Net for sending this chapter for our enjoyment.

Chapter 33 - George settles in his new position with the ARRL.

"Well," he said, after inviting me to sit down, "it's definite, Huntoon is going to the Coast Guard, and you're going to be our new Acting Communications Manager. You should have been appointed when Ed Handy left, but the Board didn't think you could handle the job. Can you?"

"I'm sure I could KB," I said. Everybody called him KB except the non-ham office personnel. "There isn't that much to it, now that we're off the air. But I have another job, now. I'm going to teach code at a Navy school in Pennsylvania. He stared at me and I felt exceedingly uncomfortable. "How come I didn't know about this?"

"I didn't know about it myself until yesterday, when I received a telegram from them. I'm to report for work in three days. I was going to inquire about a leave of absence today." KB's stare bore right through me. "Do you think you'll get it?"

"I don't see why I shouldn't," I said, with my voice shaking a little. "You gave Joe Moskey and others who went into war-related industry leaves of absence."

"That was different. Teaching code isn't exactly an industry."

"That's what John Huntoon will be doing isn't it?"

"Yes, but he'll be in the Coast Guard, a military service. You'll remain a civilian, won't you?" He didn't give me a chance to reply. "You expect to return here after the war?"

"I'd like to have the option," I said, then added in a low voice, "but not if I'm not wanted."

"Did this school in Pennsylvania offer you a draft deferment?"

“They said they’d try and there was a good chance, but they couldn’t guarantee anything.”

“Of course not. Are they paying more than you’re getting here?”

“A little. Not much.”

“Have you liked working for the League?”

I shrugged. “Very much. Amateur radio has been a big part of my life, and the League is amateur radio. That’s why I want to come back. This Pennsylvania job is only for the duration.”

“Or less. When the need for CW operators runs out, they’ll probably close the school. Have you thought of that?” I hadn’t thought of much of anything, except that I wanted to get out of this headquarters where it appeared I wasn’t really wanted and had little future.

But it was my own fault, I felt. Joe Moskey was right; if you don’t push yourself, you’ll never get anywhere; and I wasn’t the pushy type. I sat mute, not answering his question. He turned and looked out the window of his corner office onto La Salle Road and busy Farmington Avenue thoroughfare half a block away.

“Do I remember that you’re a college graduate?”

“Yes, Penn State. I graduated in 1936 and got my master’s degree in 1939.”

“Electrical engineering?”

“No. English composition. I consorted with a lot of engineers at W8YA, though.”

“That’s where Doc Woodruff teaches, isn’t it?”

“Yes. I didn’t see much of him though. Gil Crossley, an instructor, runs the station.”

“And yet, with two college degrees you took a job as second operator at W1AW at what - twenty-five bucks a week?”

“Twenty-two when I started. I’m doing a bit better than that now.”

He continued looking out the window while I sat there nervously fidgeting.

“George,” he said, finally. “You said something a while ago about being wanted. You’re not only wanted, you’re needed. The League is starting to break up. Almost half the staff has left, either drafted or in the defense industry.

“We have an important job to do in civil defense communication which is essential to the war effort, but we can’t do it if all our best people leave. John Huntoon, as acting communications manager, was slated to undertake some important federal government contacts which would

put us in good stead to assist the government in supplying crucial civil defense communications by those amateurs not eligible to serve in the Army or Navy.

“The draft won’t catch up to you for at least another year. If you stay on, I’ll up your salary to quite a bit more than that school will give you; and if the draft does catch up to you, I’ll get a hearing before your draft board.

“By that time, if all goes well, we’ll be well established in federal government circles, and I think we’ll have as good a chance as that school in getting you deferred, maybe better. What do you say?”

I was astounded to hear his voice break a couple of times as he made this offer. It made me realize how dedicated this man was to the League, amateur radio and the war effort.

I said I’d have to think about it. I had already decided to go to Pennsylvania. Now I had another decision to make. I had thought Louise would be delighted to be in Hollidaysburg for the duration; it was much nearer to Coudersport than Hartford, but she didn’t want to give up our nice little house in Newington. I had given her the impression that we could rent it for the duration and return to it after the war end. Although reluctant, she had agreed to this. Now, with this new development, we could remain where we were, and she was delighted.

There still remained the threat of the draft. We had heard that they were starting to draft young married men without children. We wanted children, eventually, but we had decided to wait until the war was over. Even if we started a child now, it would not change my draft status. I would still be childless as far as my draft status was concerned.

I wired the Keystone Schools turning down the job. It turned out to be a good decision. KB would not have given me a leave of absence and when the war ended or the Keystone Schools ceased operation, whichever came first, I would be without a job.

The crisis was over - temporarily, anyway. I became acting communications manager of a department of two people – Lillian Salter and myself. Lil was a spinster lady who had been Ed Handy’s stenographer and, you might say, interpreter, for several years prior to my arrival on the scene. She was very small, had a fiery temper, very little executive ability, a great deal of expertise in typing and figuring out Ed’s dictation and rough-drafting. Dictation was done on dictaphones using wax cylinders. Ed dictated most of his correspondence on these cylinders and Lil had the task of playing them back and transforming them into letters, which she would then take into his office for signature.

I had occasion to listen to one of these cylinders once and marveled at her ability to make sense out of them. Not only was the quality inferior, but Ed talked in machine-gun fashion in his high-pitched voice interspersed with frequent throat-clearing, ums, ahhs, and coughs.

Incredibly, Lil seldom had to inquire of him just what he was trying to say. When Ed rough-drafted a bulletin or a piece of expository writing, he pounded it out on his old No. 5 Underwood typewriter, single-spaced; after which he would go over it with soft pencil, crossing out parts and adding text here and there by scribbling in the narrow margins with lines and arrows showing where the substitute text was supposed to fit. Quite often he would run out of margin, and would scribble or type on a narrow strip of paper, which he would then staple

to the sheet. Lil once showed me a sheet from a rough-draft bulletin that he had just given her to be put into page form. It looked like a paper spider, a sheet of 8-1/2 by 11 paper with illegible scribbling all over it with several streamers stapled onto it.

I never thought they paid Lil enough for the kind of work she did. I probably wasn't too easy a boss to work for by ordinary standards, but after Ed Handy, Lil must have found working for me a great relief.

Coming in Chapter 34 - The ARRL Apparatus Bureau.

TEX Mailbox:

Please join me in welcoming **Gary, K5QOW**, *back* to TEX after an absence of over a quarter century. In response to my "welcome" message to him, Gary wrote: "Thanks for the welcome. I am not new to TEX or traffic handling in general. However, it has been a long time since I was active. 25 to 30 yrs ago I was a net control station on TEX, TEX SS and the Southwest Traffic net. We Methodist ministers move a lot so changes of locations and situations have interfered with my first love hobby, "Ham radio." I am now "located," that is, not under appointment, so I have been in this location 13 years, longer than any place my XYL and I have been since we married 46 yrs ago.

I did allow my license to expire several years ago but I started over this past April. I am glad to get the old call back (K5QOW). It was first issued to me as a novice in 1958, so I am one of the real "old timers."

I am a volunteer fire fighter and communications officer for our VFD (of course). As such, I am an elected delegate from the Middle Rio Grande COG to the Texas Statewide Communications Interoperability Planning group in Austin. And as a local MACC team member, I needed to have the license back in force so that I could use amateur HF frequencies in that capacity. Two of our MACC teams will be (*were*) deployed to the Corpus Christi area July 7-9 for an Emergency Communications Preparedness exercise. I may be checking in to TEX from there.

My actual QTH is Reagan Wells. Our phone comes from Leahey and the mail from Uvalde. Concan is just about 7 or 8 miles away and easier on CW. I can handle traffic for Concan, Leahey, Reagan Wells and Uvalde.

Tnx es 73,

*Rev. Gary R. Curry, K5QOW
Located United Methodist Elder*

I heard from **Tom, K4VIZ**, regarding the "cell phone popcorn" video that I reported in last months' newsletter. Tom wrote: "Just for your info, the cell phone popcorn was a result of some neat "photoshopping". Actually, the popped corn was dropped in from above and the timing messed with. I saw this explanation somewhere recently, but in my advanced years, I don't remember where!!"

73,
Tom / K4VIZ

Just missed **Brian, N5BA**, at Hamcom it appears. Brian wrote: "Tried to get to the 8 AM class at Hamcom to have a quick eyeball QSO, but Jo Ann said I just missed you. You had to take off to feed your father.

I roamed the halls both Friday and Saturday, but tried to stay out of as much trouble as I could. Maybe next year.

73,

Brian N5BA

Pat, KD5TXD, sent in the following report about her Field Day experiences.

Field Day in the Wild Horse Desert 2010

The Wild Horse Desert Hams ARC gathered once again for Field Day at the Kingsville Convention and Visitors Bureau's Visitors Center. They have two of the nicest flagpoles in the town. The plan was to use the flagpoles to raise a dipole antenna. The only problem this year is one of the flagpoles' ropes was broken. That was a crushing blow to the antenna committee.

As the antenna committee stood at the base of the flag pole in mourning for their great antenna plan the CW committee made the bold suggestion that we load up the flag pole itself to see if it would work on one of the bands. The idea was met with skepticism at first. However, the technical gurus were deep in thought, pondering the possibilities.

Coax pressed to the flagpole with hose clamps

Suddenly one was rummaging through the parts box in the back of his truck. He pulled out several hose clamps. Another ham dashed off to get the coax. The final antenna committee member whipped together a batch of radials. With antenna analyzer in hand they bound the coax, center core exposed, to the metal flagpole using the linked hose clamps. The coax braid was attached to the radials. It was a 3:1 on 40 meters, and a 5:1 on 80 meters. Could we?? Is it possible to use the MFJ to tune this down more?

The antenna committee rushed into the building. They ran the coax through the coax port that they installed the previous year. The coax was attached to the tuner. The dials were spun and tweaked.

Closer...closer...closer...and matched. We were up and running on 40

meters using the flagpole. The first voice we heard was that of Jo Ann, KA5AZK, on the special Field Day edition of the 7290 net. We called and she heard us.

Radials spread at the base of the flagpole

We had several other antennas up. But the flagpole was the treat of the day. Everyone had to try working a contact using the flagpole. The CW committee was totally pleased to be passing Field Day traffic on OTN later in the afternoon. Just remember, when your rope has broken, just load up the flagpole.

Note there is a G5RV connected to the other flagpole.

73!! Pat KD5TXD

TEX Net Topics

Any help with the **12** open NCS/liaison slots, including **4** open *primary* NCS slots and **3** open *primary* RN5 slots (all shown in **red**)? Please consider taking one of these, or even an open backup position.

Thanks again to Sam, W5CU, Scott, W5ESE, Tom, NK5Z, and Rodney, W5DY, we managed to get through the month only missing one RN5 schedule (which was wiped out by Field Day).

CAN, early RN5, and PAN continue to use 40 meters as primary for the summer season. We have not had good conditions for using 40 meters on early TEX, so for now we will remain on 3541 as primary for both sessions.

TEX CW Net Weekly Schedule

NCS Backup: W5DY, W5ESE, K6JT, N5PWG, KD5TXD

Statistics:

Check-ins came up again, compared to previous months. Vacations and illness were the primary problems then. Traffic was about the same as last month, albeit continued low.

Rodney, W5DY, with 33 (55%) claimed top QNI spot, Scott, W5ESE, claimed 2nd with 31 (52%). Tom, NK5Z, captured 3rd with 26 (43%). Thanks to all who checked in for your support. I was happy to see the QNI count come back up a bit.

It was nice to see Ken, W5UFG, check in once again after a long absence. We did not have any visitors, but we now have a new regular op, Gary, K5QOW, who was on TEX many years ago and has rejoined once again.

The complete list of stations and traffic / liaison totals are shown in the following table. Traffic averaged 2.2 per net session (2.1 last month). Net time averaged 12.3 minutes per session (compared to 10.9 last month). Check-ins averaged 4.5 per session (up from 3.6 last month).

* Capable of 160 meter operation

Operating:

Rodney, W5DY, our assistant manager (and STM for STX) has an idea that will hopefully stimulate some traffic in the system. Rodney wrote the following:

Hello Net Managers and Lee,

I have devised a very short message that may help generate some traffic. I would like for you net managers to have your net controls give a QST on each of their nets for one week starting the 1st of August asking for participation in this project. To begin with, one week should be sufficient. If the project is successful, we may try it again for another week.

Since most (SSB) nets are one hour, the QST should be given at the beginning of the net and twice more during the net. For nets that last two hours, the QST should be given at the beginning of the net and four more times during the net.

The QST will be:

"QST from W5DY, South Texas Section Traffic Manager. We are asking everyone to send a message to a family member, friend or fellow ham. The message text is simply ARL Fifty, with HXC/E in the header".

For CW nets:

"QST de W5DY STX STM X We are asking everyone to send a message to a family member friend or fellow ham X The message text is simply ARL fifty with HXC/E in the header".

I would appreciate your input on this project, so please send me a message (preferred) or email me (if too long for a message) with any suggestions or criticisms. You may also use your email list of regular net participants to get the word out. I would like to keep things "radio" related, but in this age of Internet and cell phones, any way to get the word out is ok.

If you know of other net managers who would like to try this that are not included in this email, please let me know and I will get the info to them.

Thanks and 73,
Rodney W5DY

Until next month, 73, Steve

 TSN Net Manager

The telegraph key image is courtesy of FCIT

Greetings from the Wild Horse Desert – home of your TSN Manager

June saw many of us getting ready for and participating in Field Day. Hope you were able to work some Field Day traffic on CW. Conditions were the battle for my Field Day station K5WHD. Our Wild Horse Desert Hams set up shop at our local Visitors Center again this year. I was able to check into the Texas CW Net with some field day traffic, but W5ESE and I tried but just couldn't copy well enough.

There is always next year for Field Day. However, you don't have to wait until Field Day to send traffic. W5DY, our South Texas Section Traffic Manager has plans for all of us to generate and work some traffic. Be listening for his QST on the nets. Then get your radiogram pad out and compose some traffic to actually send to friends and family. NTS can't work without us actually sending some regular traffic. We can't just depend on folks like Pat and Arley (WB5NKD and WB5NKC) up in OKC to do all the heavy lifting for us. They make traffic every day. Now it is our turn to come up with some fun, individual messages for folks that we know.

This is a great place to learn how to handle traffic on CW. If you are a voice net traffic handler this is a great addition to your amateur radio skill set.

See you on the air!! Bring some traffic to TSN. It is good practice.
